Introduction

How often do you intentionally think about your brain? Do you ever stop to wonder at its unbelievable capacity and supreme ingenuity? Do you at least give it a spring clean and regular refurb? Like the majority of the population, your answer is 'no'.

Amazingly, we only use a mere 10% of our brains, yet seldom do we ever think to invest in a little training every now and then. Before now, most scientists believed that we were stuck with the brain we were born with. Unfortunately, that hypothesis has gone out of the window. It's no longer relevant.

Here comes neuroplasticity – a new theory that has proven that one very incredible fact; **our brain can change if we want it to and it can advance if we want it to.**

This means that if you are not very intelligent in one area- that's okay! **You can have the option to literally 'change that area of your brain; through little training.**

Here is an easy way to look at it. Your brain is a muscle. You need to exercise it regularly.

This app contains 71 powerful game techniques you can apply to stimulate your brain power. However, it takes your personal responsibility, commitment, discipline, determination to get it done.

Genius they say is 10% inspiration and 90% perspiration. Nothing works if not applied.

Ensure you make this app your lifetime companion

Now let's get started, shall we?

BRAIN WORKOUT 1

Breath Deep

Deep breathing actually increases oxygen levels and blood flow to the brain. 10-20 minutes of daily deep breathing can make a huge difference in the quality of your life and brain functioning process. More air in, means more oxygen in the blood and therefore in the brain. Breathing through your nose and you'll notice you use your diaphragm more, drawing air deeper into your lungs. Several deep breaths can help you to relax, which is conducive to clearer thinking. Don't wait until fight or flight kicks in before you mind your breath. Controlled breathing not only keeps the mind and body functioning at their best, it can also lower blood pressure, promote feeling of calm and relaxation and help you to de-stress.

Game & Activity:

Take a time out on your own in a serene environment and try practicing deep breathing. Carry out this exercise for 10 straight days at a particular period of time. Write about your deep breathing experience and share with your friends.

BRAIN WORKOUT 2

Meditate

Meditation is a prime key to your brain power development. It helps your mind to capture thoughts and images together it helps you to be mentally stable. Meditation is a mental discipline which you can attempt to get beyond the conditioned thinking mind into a deeper state of awareness.

A simple mediation you can do right now is to close your eyes and pay attention to your breath. When your mind wanders, just bring your attention back to your breath.

Game & Activity:

Set a mediation time with an alarm clock and on anything positive; a powerful quote, a beautiful scene etc. Find something wonderful to meditate on for at least 20 days. Write about your meditation experience and share with your friends.

BRAIN WORKOUT 3

Sit Up Straight

Your body posture determines the efficiency of your breathing. It affects your thinking process. Prove it yourself by doing math in your head while slouching, looking at the floor and letting your mouth hang open. Then do the mental math while sitting up straight, keeping your mouth closed and looking forward or slightly upwards. You'll notice that it's easier to think with the latter posture.

Game & Activity:

Try sitting away from the back of your chair or on the floor with your feet placed firmly on the ground. Practice this sitting exercise for 10 days while trying to memorize words, calculate numbers in your head and create an imaginary scenario in your head. Write about your sitting up experience and share with your friends.

BRAIN WORKOUT 4

Good thinking Habits

At all times and places, our mind is constantly thinking, interpreting and trying to make sense of what is taking place. Your thinking pattern and responses becomes a habit with which you navigate the world. Learn to reflect on your thinking and be aware of what you reflect on. Contemplate on what you desire to become and connect with this image as if you are already this ideal. You can develop good thinking habit with some effort and intentionality.

Game & Activity:

For 15 straight days in order for you to make you develop a good thinking a habit, identify 15 problems for each day and think of 15 solutions to these problems using problem solving techniques. Write about your good thinking habit, how it has impacted your life and share with your friends.

BRAIN WORKOUT 5

Exercise

Exercise has been proven to increase brain power and even create new neurons in the brain. Long term exercise can boost brainpower which isn't a surprise. Recent research shows that cognitive function is improved immediately after just 10 minutes of aerobic exercise. Exercise helps reduce stress, improve self-confidence, prevents cognitive decline, alleviates anxiety, sharpen memory, help control addiction and increases relaxation.

Game & Activity:

Create an ample time to exercise for 30 days on a stretch. Kindly note that you'll feel some pain after the first 2 days but don't stop. Carry out various kinds of body exercises and see how it will help to boost your brain power.

Write about your exercise activity and experience. Talk about how it has impacted you and share with your friends.

BRAIN WORKOUT 6

Draw a Picture

Drawing stimulates the right hemisphere of the brain and inspires creativity. Drawing and other observational art projects such as collage and collections encourage an eye for detail and the ability to differentiate or find similarities that might have been overlooked. Observational drawing strengthens memory, promotes spatial understanding and manual dexterity. Art is a fruit of memories, imagination and observation. Memories are the inspiration. Imagination provides the materials for constructing art. Observation helps the artist make sense of the project, giving it direction and meaning. You mustn't be an artist to draw a picture; you just need to take a pencil, paint, brush and draw just draw.

Game & Activity:

Get a drawing board, canvas or art paper and take a time out to draw something you like. Do not be in a hurry to finish it. Take your time for at least 15 days to perfect your drawing. Ensure you pay attention to every detail of the drawing. Upload the picture of your drawing exercise and share with your friends.

BRAIN WORKOUT 7

Learn a New Language

Learning adds more structure to the brain and improves the brain's speech centers. Learning a new language has been shown to halt the age-related decline in brain function. It also introduces your mind to new concepts and new ways of looking at things. A word in one language can mean something entirely different in another language but that's the beauty of learning new languages. The brain has the capacity to absorb and retain at least 3 new languages. This is a good way to boost your brain power.

Game & Activity:

Find at least 2 or more foreign languages you can learn within a period of 30 - 40 days. You can start everyday by writing down, learning and verbally practicing at least 10-20 essential words that's commonly used in the languages you are learning until you master how to use and apply them when speaking. Write about the languages you've been able to learn, how it has impacted you and share with your friends.

BRAIN WORKOUT 8

Take Fish Oil

Fish oil and fish oil supplements are like membrane material for the brain. There is an increase in overall brain activity after taking fish oil for a while. The main sources of fish oil include; salmon, trout, mackerel, herring, sardines, pilchards and kippers. Taking fish oil is one way to improve your brain power as it strengthens the brain muscles and as well prevents memory loss or other mental deficiencies.

Game & Activity:

Learn how to extract fish oil from a fresh fish as this will be an added advantage for you or buy a fish oil supplement from the supermarket. Take the fish oil or the fish oil supplement every night before you sleep for at least 10 days or more. Write about your experience with fish oil and share with your friends.

BRAIN WORKOUT 9

Engage in a Debate

A good healthy debate strengthens the brains ability to think quickly and apply intelligence to verbal situations. Work to build your brain power by engaging in plenty of healthy debates. Debating is a way of reasoning that involves talking which is only good for the brain if you are actually exercising it. When you debate, you are expressing your thoughts while also analyzing the thoughts of your debate opponent as well thereby sharing ideas and insights. This is one way of improving your mental capacity.

Game & Activity:

Get a few of your friends in your school, neighborhood or community. Congregate yourselves in a beautiful ambience in two groups. Then choose an intelligent and interesting topic to debate on. The first group should propose while the other group should oppose. Ensure you plan and prepare adequately before the debate. Take out time to learn a few lessons after the debate. Write your debate experience and share with your friends.

BRAIN WORKOUT 10

Avoid Unnecessary Argument

When you defend a position vigorously, especially when it is just to win the argument, you invest your ego into it. Argument is not conducive to the easy acceptance and use of new information. This is not a recipe for better thinking. Debate can be a valuable thing because you exchange ideas but when you argue, there's no regard to other opinions, egos are flaunted, mental energy is dissipated, emotional rage is ignited which finally leads to an empty feeling. This is why argument should be avoided at all cost.

Game & Activity:

Write 15 strategies that can help you avoid unnecessary argument. Apply these 15 strategies for a period of 20 days or more. Document your experience on the 15 strategies with which you've used to avoid unnecessary argument and share with your friends.

BRAIN WORKOUT 11

Adjust Your Beliefs

Believe you are smarter and you'll become smarter. Affirmations works but it's better when there's an evidence of your affirmations. Ensure you make notes of your little successes. Appreciate yourself when you do something creative. When you have a good idea, take note of it. Gather the evidence of your intelligence and you'll start to experience more of it. Research has shown that positive belief system especially in the future tense, speeds up the creation of cells and dramatically reduces stress and anxiety. If you're currently good at thinking positively about yourself and your environment, chances are that you already have powerful brain than negative minded individuals.

Game & Activity:

Take 30 minutes' daily to adjust your belief system by thinking more positively and assertively. Change the wrong and limiting beliefs of yourself. See yourself from a positive point of view irrespective of what you have been through. You'll notice an improvement in your thinking abilities and problem solving skills. Practice this for 20 days. Write your experience and share with your friends.

BRAIN WORKOUT 12

Learn to Speedread

Speed reading involves not only the ability to read vast amounts of information at an accelerated rate but also the ability to absorb and comprehend the information you've just read. Speed reading enhances mental acceleration. Learning to speed read is an aptitude you need to improve your brain power because your brain works faster and better when you speed read. As your skills improve so does your ability to not only learn new things rapidly but also retain the knowledge you've gained.

Game & Activity:

Get at least 10 or more books on several subjects such as science, business, electronics, fashion, personal development etc. give yourself a target to complete the reading of at least 2 books in a day through the practice of speedreading. Ensure you make more research about speedreading. Practice speedreading for 20 days and share your experience with your friends.

BRAIN WORKOUT 13

Write

Writing is good for your mind in a number of ways. It's a way to tell you memory what is important, so you'll recall things more easily in the future. It's a way to clarify your thinking, it's a way to creativity and analytical ability. Writing is linked to an improved memory and an expression of thoughts. When you write, you're strengthening your brain's natural ability to convey thoughts and feelings. Writing is a great way to exercise your ability to analyze and build a thought process with critical thinking. Consequently, diaries, idea-journal, poetry, note-taking and story-telling are all ways to use writing to boost you brain power.

Game & Activity:

Get a physical journal, spend the next 10 days writing an intriguing and captivating imaginary or fictional story of your choice. One best way to know if its really interesting is to ask your close friends to read it and give you their honest response. You can write about your future, technology, relationship, family etc. but ensure its worth reading. Document your writing experience and share with your friends.

BRAIN WORKOUT 14

Get Some Sleep

Be sure to always fulfill your brain's need for sleep. Sleep clears out mental clutters and unimportant thoughts. Getting a good night sleep can also be the difference between a sharp memory and feeling forgetful. A minimum of 5 hours is required for sleep. Sleep is like a mini detox for the brain. This is when your body regenerates cells and removes all the toxins that have built up during the day. Everyone has different sleep requirements, be sure to fulfill yours!

Game & Activity:

Take a time out for yourself, switch off your phone and gadgets, eliminate your worries and fears and deliberately decide to sleep early from 9pm till morning. Try this for the next 10 days and see how refreshed and revitalized your mind will be and how effective your brain will function. Don't forget to share your experience with your friends.

Upload your activity Picture:

Share Your Experience:

BRAIN WORKOUT 15

Mindfulness Exercise

Mindfulness is the awareness of the present. Its living here and now. Through mindfulness, you're free from being entangled in thoughts of your past and you are freed from worrying about the future. Mindfulness and clear thinking works automatically once you remove distractions. Learn to stop and watch your busy mind. As you notice things that are subtly bordering you, deal with them immediately. With practice, it becomes easier as your mind becomes powerful. Mindfulness eliminates mental distractions and helps you to focus more on the things that are important and relevant to your personal development.

Game/ Activity:

Pick up an object that you have lying around. Any mundane every day object will do; a cup, pen, bottle etc. hold it in your hands and allow your attention to be fully absorbed by the object. Observe it. Don't assess it, think about it or study it intellectually. Just observe it for what it is. You'll feel a sense of heightened 'nowness' during the exercise. Document your experience on your mindfulness exercise and share with your friends.

Upload your activity Picture:

Share Your Experience:

BRAIN WORKOUT 16

Be Curious

Instead of taking everything at face value, get into the habit of questioning everyday things. By being 'curious' and questioning everything, you force your brain to innovate and create new ideas. Curiosity may have killed the cat, but more importantly it created super important things like electricity and computers. This is a great way to keep your brain in shape. Just get in the habit of asking questions often, even if it's only in your mind. Ask anything that comes to and ponder the possible answers. Necessity is known to be the mother of invention but curiosity is actually the source of creativity and invention.

Game Activity:

Look at things around you, TV, phone, computer, furniture, bulb, books, wall, table etc. Start asking questions about what you see. Ask questions on how things can be done differently. Ask questions about why things are the way they are. Ask questions about how things can be done better. Ignite your sense of curiosity. Ask questions and don't stop asking until you find the right answers. When you get answers jot them down and share it with your friends.

BRAIN WORKOUT 17

Visualize

Creative visualization refers to the practice of seeking to affect the outer world by changing one's thoughts and expectations. Creative visualization is the basic technique underlying positive thinking. Visualization has been associated with focus at a deeper level. It has been linked to lower stress, increased creativity and peak mind-body performance. Visualization helps you to create imaginary pictures of what you desire or what you want to achieve. When you visualize, you are putting thoughts and images together to form a mental experience of what is expected and anticipated. This exercise enhances your brain power and stimulates it towards proffering ideas on how to get things done.

Game & Activity:

Wake up early in the morning when there is less distraction and practice the art of visualization. Visualize about getting good grades, visualize about being the best at what you do. Visualize about the kind of life you truly desire. If you do it properly you'll feel this pulse within as if it's real. Do this for a period of 20 days.

Write about your visualization experience and share with your friends.

BRAIN WORKOUT 18

Go for a Walk

Exercise has been shown to benefit your brain and walking is one of the best exercise for many. Walking is a great form of exercise that is easy and very effective for boosting brain power. It is low impact and the rhythmic nature of it seems to put you in a state that is very conducive for clear thinking. Walking outs your mind in a relaxed state of clear thoughts and brain function. It gives your brain a chance to wander and free itself from any troubling thoughts.

Game Activity:

Take a time out in the cool of the evening to take a walk. If you live close to the beach all the better. Walk for at least 30 minutes every day for the next 20 days. Write about your walking experience and share with your friends.

BRAIN WORKOUT 19

Live a Drug Free Lifestyle

Everyone knows that drugs are bad for them. Drugs do not foster creativity; they kill creativity and deplete brain cells. Depending on the kind of drugs, the effects can range from brain bleeding to cell loss to impairments in the neural growth. There is an erroneous belief that drugs helps to boost abilities. The truth is that it actually damages it. Naturally, an individual is designed to use his natural ability and capacity to get things done but when an individual starts relying on drugs for mental energy, such individual will soon pack up. Live drug free and keep your brain more powerful.

Game /Activity:

Do something that's slightly different. You might not be a victim of drugs but there are others who are. So use this medium to create an unusual online and offline campaign against drugs. Use pictures, videos or placards to create your campaign. Ensure its different and captivating. Document your online and offline drug campaign and share your experience with your friends.

BRAIN WORKOUT 20

Drink Fruit Juice

Drinking natural fruit juice revitalizes the brain and provides cells with a refreshing jolt of nutrients. Great juices to drink include; grape, orange, cranberry and apple juice. Most juice provide your brain with vital nutrients which in turn provide you with more mental energy and focus. Studies have shown that juices with vitamin C increases the intelligent quotient of children. Calcium-fortified juices provide excellent source of calcium in the diet. Generally, taking of juice enhances the mental faculty function and nourishes the brain.

Game Activity:

As much as you can, sample various kinds of juices such as grape juice, lemon juice, orange juice, cranberry juice, pineapple juice, apple juice etc. Get the fruits, squeeze the juices from the fruit, remove the seeds, put juices in several containers. Store them in a refrigerator and enjoy its sweetness and juiciness when they are chilled while vitalizing your brain power. Document your juice experience and share with your friends.

BRAIN WORKOUT 21

Train Your Memory

How often do you hear people say that they wish they had a better memory? Yet no one does anything about it. Memory training is that art of enhancing the ability of the brain to process and store positive information that can be used in the future for the benefit of the individual. Most times, bad or traumatizing events that you wish to be forgotten fast seem to be easier. It takes training to have the brain learn how to memorize what is expected. An individual with a better working memory training can enhance problem solving skills of the brain.

Game Activity:

Set a time out to train by memorizing at least 20 different names and their phone numbers for about 10 days. Keep practicing until you know perfect it. It's a tough work but it will help improve your memory. Once you've known that, increase the number again until you can memorize up to 50 names and their numbers. Document your memory training experience and share to your friends.

BRAIN WORKOUT 22

Do Something New

Often times, it can be easy for you to get stuck in your ways, habits and other conveniences which can be fine but the flip side of it is that it can become repetitive, boring and monotonous which kills interest and creative thinking. Doing something new keeps your mind alert. You usually need to be on your toes when trying something new, at least so you don't repeat the same mistake. When you experience something new, you stimulate your brain. The only way to change the structure of your brain is to do something new and different. This creates new neural pathways and increase your intelligence.

Game Activity:

Take a pen, list down all what you are used to doing that has now become monotonous. Afterwards, think about doing something totally new and different from what you are used to on a whole new level. List down at least 15 new things you can do within the space of 15 to 20 days. Once you are done listing them down, start implementing them as soon as possible. Document your new experience and share with your friends.

BRAIN WORKOUT 23

Avoid Too Much Stress

Research has shown that stress causes brain damage. Long term stress has repeatedly been shown to hurt the brain, not to mention the rest of the body. A little stress will never hurt anybody. But too much stress actually causes detrimental increase in the hormonal ‘cortisol’ which in high levels, kills brain cells and suppresses brain functioning. Excessive stress causes more injury to your brain.

Game Activity:

Itemize all the various issues, activities that’s causing both mental and physical stress for you. Do everything within your reach to cut them down irrespective of how important it might seem. Ensure you document your experience on how you’ve been able to avoid too much stress and share with your friends.

BRAIN WORKOUT 24

Be Empathetic

Being empathetic and trying to understand the emotions of others is a skill that your brain can learn. Being empathetic allows your brain to relate to the emotions of others. As you empathize with other people, you tend to feel and connect with their emotions and as a result, you're able to create a picture with your imagination. The brain works with the emotion. When you empathize, you understand what it feels to be human; your heart feels bigger, more resilient and more capable, your love expands, you reach your ability to support others. You are able to make sense of another person's circumstance while providing creative possibilities.

Game/Activity:

Create a time out to reach out to a friend who might be in need of help. Being in need of help is not limited to money alone. Take the next 15 days to empathize with people around you; feel their emotion, their pain, their frustrations and their hurt. Try to prefer a solution to them and see how it goes. Document your empathetic experience and share with your friends.

Try Different Perfumes & Scents

Perfumes are the fragrances that are made from both natural and artificial commodities. Fragrance oil specifically produced from flowers, fruit tree blossom, woods and many other flavors in it. They are synthetic essential oils. Trying different perfumes and scents is a very good way to stimulate your senses when the perfumes are slightly inhaled. The various aromas, scents and fragrances are good for mental therapies most especially when you are engaging in mental tasks.

Game Activity:

Get several fragrances and perfumes. Fill the atmosphere of your house with it.

Make attempt to slightly inhale some of it. Ensure you are your environment smell good especially if you are carrying out some mental tasks. Fragrances and scents has a way of stimulated your mind. Document your fragrance, perfumes and scents experiences and share with your friends.

BRAIN WORKOUT 26

Do Cross word puzzles

Cross word puzzles bring out your brain's ability to think and recall past memories. Challenge of completing crossword puzzles is definitely invigorating and stimulating. There are 4 things crossword puzzles can do; it can enhance vocabulary, strengthen word recall and memory, stimulate problem solving skills and improve focus and attention. Doing brain stimulating activities that incorporate novelty, variety and complexity can help build your cognitive reserve and reduce the effects of dementia and AD (Alzheimer's Disease). Crossword puzzles are still a great way to sharpen your cognitive skills.

Game Activity:

Find newspapers or books with crossword puzzles or probably buy the game board and start practicing with it. To make it more interesting, find a partner you can play the crossword puzzle with together. Ensure you document your crossword puzzle experience and share with your friends.

Eat Nuts

Nuts and seeds such as almond, walnuts, pistachios, pecans, pumpkin seeds, sunflower seeds and peanut etc. all contain a host of healthful nutrient. Just a handful packs a powerful punch of vitamins, minerals, and fats, all of which work together to impact your heart, brain and your waistline. New studies are beginning to prove nuts effectiveness at increasing brain power. Just one in a day can diminish inflammation, provide satiation fiber and protein as well as immune-boosting minerals.

Game Activity:

Make enquiries about these nuts around you. Get as many of these nuts as possible based on your capacity. Start enjoying its sweet and crunchy taste. It's always advisable you eat these nuts before you eat breakfast or dinner. Try it as 7 days and as many times as possible until it becomes a lifestyle. Ensure you document you nut eating experience and share with your friends.

BRAIN WORKOUT 28

Avoid Sugar

The harmful effects of sugar go way beyond empty calories. Added sugar is so unhealthy that it is probably the single worst ingredient in modern diet. Sugar consumption has been associated with many serious diseases, including obesity, type II diabetes and cardiovascular diseases. Sugar, due to its powerful effects on the reward system in the brain can lead to classic signs of addiction. A simple carbohydrate can give you 'brain fog', this sluggish feeling that makes it hard to think. Before any mental task, it's very important to avoid anything sugar.

Game Activity:

Give yourself a self-disciplined task to avoid anything with a high content of sugar for 50 days such as carbonated drinks, minerals, bread, pastas, etc. Ensure you are accountable to someone to enable you stay disciplined to the task. You will see the difference in your body and mind. Afterwards, document your avoiding sugar experience and share with your friends.

BRAIN WORKOUT 29

Change Your Environment

Your environment is an important part of you and your identity. Every day, it reinforces who you are. Tear your environment down and rebuild it to help you create and reinforce a new part of yourself and the person you want to become. To keep your brain properly stimulated, it's important to keep changing your environment. To change your environment, you can join local groups of like-minded people to find new and potentially great friends. Try to find friends that can be a positive support to you. Spend more time with them. Who you spend time with will decide much of how you'll feel and what you'll experience. Changing the environment helps to change the brain.

Game Activity:

Have a look at how to spark up your creativity and come up with 10 ways to change your environment so it can be more suitable for you and the kind of person you want to become. Say yes when someone invites you for a function because you never know who you'll meet. Pass through a different route, eat at a new restaurant. Meet new people etc. Do document your experience with trying new environment and share to your friends.

BRAIN WORKOUT 30

Turn Off The TV

Turning off your television will gain you an average 4 hours per day. Imagine if you took that time to exercise, give your brain a workout and develop strong relationships, not only would you be adding years to your life, you'll become more interesting, energetic and fun. Television eats your time, makes you overweight, makes you uninteresting, ruins your relationships and makes you lose opportunities. Television is not relaxation, it is addictive. A little TV will not hurt but the longer you stare at the TV, the more unproductive your brain becomes and as long as your brain remains unproductive, it can't function as it ought to. Therefore, cut down the amount of time you spend watching TV especially on things that can't enhance your mental productivity.

Game Activity:

Give yourself a self-disciplined task to reduce the amount of time you watch TV.

Try not to watch TV for a week, at first you'll feel strange and awkward but stick it and you'll love the extra time. Document your avoiding the TV experience and share with your friends so they can learn from you.

BRAIN WORKOUT 31

Mimic Others

Have you ever noticed that when you hang out with your best friend, you tend to act and sound alike? There's an evolutionary explanation to this. Studies show that mirroring-copying other people's body language and repeating their words helps to form and strengthen relationships. Being able to mimic other's action and talks activates several areas of the brain that are usually inactive. Mimicking others can be very interesting if it's done in a fun and playful manner. It can improve your brain power and the brain's natural ability to adapt quickly when faced with new situations.

Game Activity:

Find someone you admire and try as much as possible to mimic the person. Put in some work to ensure you talk, act and sound like the person. It takes a lot of effort and skill to be able to mimic someone else. Document your mimicking experience and share with your friends.

BRAIN WORKOUT 32

Eat Potential Brain foods

The brain needs to be enriched with good food in order for it to function effectively and efficiently. Foods that may be good for your brain include; Avocados, Bananas, lean beef, brewer's yeast, broccoli, brown rice, Brussels sprout, cantaloupe, cheese, potatoes, romaine lettuce, salmon, soybean, spinach, tuna turkey, wheat germ and yoghurt etc. The brain requires a certain amount of energy to reach its maximum level of functionality. Eating so much of chocolate cake and chip instead of fish and legumes, maybe that's why you can't think clearly.

Game Activity:

Make a little effort to itemize some of the brain foods you can afford. Get them and start feeding on them. Spend the next 15 days focusing mainly on these brain foods so you can really nourish your brain. Document your brain food experience and share with your friends.

Upload your activity Picture:

BRAIN WORKOUT 33

Eat Less

Eating too much food has the effect of decreasing blood-flow to the brain and increasing blood-flow to the digestive system. Overeating has the immediate effect of redirecting more blood to the digestive process, leaving less for the brain. On the long run, it can trigger arterial obstructions that reduce blood flow to the brain permanently. Reduce your amount of food intake. The brain's capacity for food intake is minimal but once it is choked up, it stops functioning as it ought to. Therefore, the lesser you eat, the better it is for you so your brain can remain active and vibrant.

Game Activity:

This task will be slightly difficult especially for those who eat a lot. However, you can give yourself a self-disciplined task to reduce your food intake to the barest minimum. Do this for the next 30 days and soon it'll become a lifestyle.

Document your less eating experience and share with your friends.

BRAIN WORKOUT 34

Avoid Junk Food

There are many benefits that can be obtained by avoiding junk food. Based on the result of research junk food gives more negative effects than positive. Junk food does not in any way promote healthy lifestyle. As a matter of fact, it has no nutritional value to the body. Junk food has been proven to decrease energy in the body and promotes 'brain fog'. When you cut some measure of junk food from your diet, you'll reap the benefit of a soother, focused and acute brain chemistry.

Game Activity:

Give yourself some measure of self-disciplined task to avoid junk food for a particular period of time. You already what junk food is so give yourself a period of 30 days to avoid junk food. Soon enough it will become a healthy lifestyle. Document your self-disciplined task in avoiding junk food and share your experience to your friends.

BRAIN WORKOUT 35

Do Something You Enjoy

Doing something you enjoy is a great way to both lower stress and rev up your brain. When you are actively engaged in an activity you enjoy, you worry less about things and you start to think better. When it comes to choosing a career for yourself, it's better you choose what you are passionate about and what you love doing than engaging on what you find lucrative but boring. Your brain power is connected to your emotion. You think better, smarter and clearly when you are in a happy mood than when you are sad and disgusted. So when you constantly do what you enjoy, your brain is always revved up to make smarter decisions.

Game Activity:

Pick one or two activities that excites you the most; especially the ones you get so engrossed in so much so that you're lost in time. Spend the most of your time engrossed in these activities for at least 20 days and watch how your life will turn out. Ensure you document your experience and share with your friends.

BRAIN WORKOUT 36

Set Goals

The first thing a successful person needs to have is a goal and the more the merrier. We all seek success and we know that nothing good ever comes easy. Setting goals is something you need to practice in order to get things right. Goal setting is a process that'll help you motivate yourself and the more detailed and precise the goal is, the better your brain will analyze the steps on how to achieve it. Setting goals activates areas of the brain associated with positive thinking and action. Setting goals is great for boosting your brain and achieving success and prosperity in life. When setting goals, ensure they are specific, measurable, attainable and time bound.

Game Activity:

Write out a goal of what you want to accomplish within a specific period of time for example 3-6month depending on the quality of the goal; such as weight reduction, reading a book, completing an online course etc. Ensure you follow it through until you accomplish it. Document your goal setting experience before and after. Then share it with your friends to learn from you.

BRAIN WORKOUT 37

Laugh It Up

Is there anything better than a contagious giggle that you absolutely can't control? It works wonderfully well in the moment, but it also has some surprising long-term health benefits. Laughter lowers blood pressure, increases vascular blood flow, reduces stress hormones, increases memory and learning etc. in a study at an institution, humor during the class led to an increased test score, improved alertness, creativity and memory. Laughter causes a natural release of brain's endorphins – chemicals that drown pain and increase overall well-being. It's a necessity for brain power development. Laughter also tends to leave you more open to new ideas and thoughts.

Game Activity:

Watch a comedy video, crack a joke and increase your endorphin level. Hang around people who make you laugh while you make other people laugh also.

Laughter is contagious, so spread it to everyone around you intentionally. Come up with creative ways to make people around you laugh and get excited.

Document your laughter experience and share with your friends.

BRAIN WORKOUT 38

Listen To Music

Music is one of the few activities that involves the use of the whole brain. It's intrinsic in all cultures and can have surprising benefits not only for learning language, improving memory and focusing attention but also for physical coordination and development. Music can help reduce the sensation and distress of both chronic pain and postoperative pain. It plays an important role in developing, maintaining and restoring physical functioning in the rehabilitation of persons with movement disorders. The power of music to affect memory is quite intriguing. Studies have shown that people who listen to music are generally smarter and have emotional intelligence than those who don't.

Game Activity:

Perhaps you're already used to listening to music, but this time, listen to it with so much intentionality. Listen to it with every fiber of your being. Spend some quality time listening to quality music giving it all your attention for at least 7 days. Let the power of music impact your brain. Document your experience listening to quality music and its impact in your life and share to your friends.

BRAIN WORKOUT 39

Develop Your Intuition

Developing intuition is one of the most valuable things you can do for yourself and those around you. Intuition is like an internal GPS that never makes a mistake. Intuition never lies; it's always right and it guides you in a way that is for our highest good. Intuition awakens you to your deepest dreams and desires. It increases your sensitivity to others. It sparks creativity and inspires you to live your best life. It warns you of impending danger and guides you to safety. One major component all geniuses have is their ability to be intuitive and they rely so much on it. When your intuitive ability has been developed, it can aid you in creating unique products, making strategic decisions or getting things done accurately.

Game Activity:

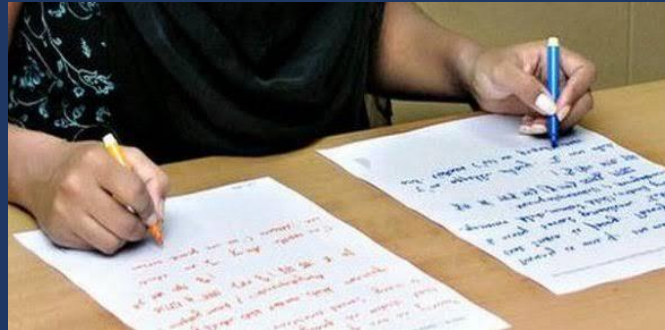

You can develop your intuition by first being able to clearly decipher the thoughts in your head. Learn to be quiet and calm on the inside while increasing the level of your concentration. Jot down every idea that comes to you. The more you practice this, the better you become. Document your intuition development process and share your experience with your friends.

BRAIN WORKOUT 40

Cultivate Ambidexterity

Ambidexterity is one special way to stimulate your brain power and improve your cognitive ability. Most scientific evidence suggest that true ambidexterity is an inherent trait but it's extremely rare. Exercises that facilitates mixed-handedness include writing with your opposite hand, taking special care to angle the letters as you would with your dominant hand and keeping your hand steady to create straight lines; using you opposite hand for simple manual skills such as brushing your teeth, holding your fork, using computer mouse, and opening bottles. Making hand exercises a focal point of your workout routine like playing table tennis, throwing a ball or painting with your opposite hand, you'll observe that it might be a little challenging but with much effort and exertion, you would improve and that will go a long way in enhancing your brain power.

Game Activity:

Upload your activity Picture:

Get two pen and two note books. One on the left side and one on the right side. Try writing, sketching or drawing with both hands at the same time.

Practice this for the next 10 days and ensure you track your progress. Document your ambidexterity experience along with its effect in your brain and share with your friends.

BRAIN WORKOUT 41

Conquer Procrastination

Procrastination is the thief of your time. It is the enemy of your success. It robs you of time bound opportunities. Procrastination slows down the brain and kills enthusiasm which is needed for the execution of anything worthwhile. If you have a project to execute, an assignment to accomplish, an idea to implement, don't wait to do tomorrow what you ought to have done today. Do away with any form of procrastination in all your endeavors. Ensure you conquer procrastination in school, workplace or any area of your life.

Game Activity:

For the next 7 days, set at least 10 tasks you can per day and ensure you do all of them. Write down all the 10 task you need to do per day and ensure you tick each task as soon as you are done with it. Document your ability to conquer procrastination and share it with your friends.

Brainstorm

Brainstorming is one of the best idea generators you can use to move from stuck to stupendous. The purpose of brainstorming is to generate as many ideas as possible. It is highly effective when done with brilliant minds. It fosters team work and a sense of belonging and will strengthen your team in addition to generating great ideas. A good brainstorming session to think of new and stimulating ideas is a great way to boost your brain's ability to think creatively. Brainstorming helps you learn new things and makes you see things from various standpoints. Get into a brainstorming session with brilliant minds like yours and get to see how you will all create incredible ideas that can solve major glitches.

Game Activity:

This is not a task to be done alone. Get a few group of trusted friends with brilliant minds. Find a pressing problem around you and you all should brainstorm and create an idea of how to solve the problem. Document the impact of solution you created during your brainstorming session and share with your friends.

BRAIN WORKOUT 43

Read Books

If you're one of those who don't make the habit of reading regularly, then you're missing out. Just like any other muscles in the body, the brain requires exercises to keep it strong and healthy. Reading books teaches your brain to adapt to absorbing large amounts of information within a short period of time. Books challenges your thinking abilities and memorization skills, as well boost your vocabulary and critical thinking skills. The more knowledge you have, the better equipped you are to tackle any challenge you'll ever face. Everything you read fills your head with new bits of information and you might never know when it might come in handy. Even when you lose every possession in the world what you can never loose is knowledge.

Game Activity:

Give yourself a mandate to read a highly informative book within a space of 7-10 days. Read with every form of intentionality. Ensure you are able to absorb enough information from the book. Document your book reading experience and Share with your friends.

Drink Caffeine

Research shows that students that drink caffeine before exams have higher scores. Why? Caffeine seems to stimulate activity in the brain, speeds up thinking and improves focus. Too much caffeine is never good as it can cause stress or trigger anger. Drink some and find out how it affects your focus and thinking abilities. Research also shows that caffeine can increase stamina during exercise, protect against eyelid spasm, may prevent skin cancer. Generally, caffeine boosts your memory power and helps to improve your concentration ability.

Game Activity:

Visit any coffee shop and ask for a caffeine. Drink. Remember not to take too much of it. However, while drinking some of it, be keen enough to find out how it affects your focus and thinking ability. Document your caffeine experience and share with your friends.

BRAIN WORKOUT 47

Develop Comparative Tasting

Comparative tasting is a private and relaxed tasting method that allows you to savor, compare and contrast each food or wine being tasted. A small plate of appetizers adds to the experience and provides the opportunity to appreciate the delightful interactions created by the marriage of food and wine. Learn to properly taste different kinds of tea, wine, coffee, cheese or anything else while becoming skilled on how to compare, analyze and differentiate the tastes. This has a very spicy way of enriching your brain power, making it quite resourceful, germane and affirmative. Your ability to develop comparative tastes will enable you to know how to differentiate between two similar objects.

Game Activity:

Get beverages like tea or coffee with 5-10 flavors. Arrange these flavors in a set of cups and try to compare the tastes. This can also be applied to wine and food with several flavors. This exercise will help you to develop comparative tasting. Afterwards, document your comparative tasting experience and share with your friends.

BRAIN WORKOUT 58

Have a Network of Supportive Friends

No man is an island as they say. You can't achieve life all by yourself. You need positive people around you; especially people who are true to you. Creating a network of supportive friends is one of the best things you can ever do for yourself. Whenever you are down, your friends will lift you up. Whenever you are stranded emotionally, you need friends who can strengthen and support you. However, don't just get support from friends, be willing to give support also. One of the best benefits of having supportive friends is their ability to help you gain clarification to a circumstance from multiple perspectives as this will help you make better alternatives.

Game Activity:

If you don't have supportive friends, then it's time to intentionally create one.

However, you must be careful enough to ensure they are true to you just as you are true to them. Take about 10-20 days to recruit good friends around you. Afterwards, document your friendship experience and share with your friends.

Upload your activity Picture:

Personal Journal

Share:

BRAIN WORKOUT 59

Don't Stick With Only Like-Minded People

Nominal people will always support you even if you are wrong, they may not want to tell you how bad they feel about you or how unrealistic your idea may be because they don't want to hurt your feelings. It's however, important to have people around you who can disagree with you. Their opinion might be hurting but it can also help you a gain clarity. Your brain needs to be challenged occasionally so it can work better. Step away from sycophants who never see anything wrong with you or your ideologies. You need people who can sometimes disagree with you. That's the only way to get better.

Game Activity:

Bring into memory those friends of yours who you've parted ways with who sometimes challenge your opinions; speak their mind and made you see things from an angle totally different from yours. Put a call through to them and

probably reunite. They're your true friends. Make friends with people who are not like minded. Thereafter, document your unlikely friends experience and share with your friends.

BRAIN WORKOUT 61

Challenge Yourself

Comfort zones are the true enemies of personal development. What you think you have achieved in the past could prevent you from making future successes. If you don't challenge yourself, your comfort zone the relaxation spot for you. Challenging yourself means doing things you normally wouldn't do, going to places you normally wouldn't go and making that effort that'll rob you of your convenience. This means that if you want to achieve something that's above the normal average, you'll have to challenge yourself, you've got to put yourself on the timeline. Every time you make your brain work, it will sweat but it will also improve.

Game Activity:

Find an area in your life you want to improve on; your weight, arithmetic, your eloquence, coding, artistic skill etc. give yourself some measure of discipline by challenging yourself to improve on it. Give yourself a minimum of 25 days to

consciously challenge yourself on that area you want to improve yourself on. Afterwards, document your experience on how you challenged yourself and share with your friends.

BRAIN WORKOUT 62

Change Your Perspective

The way you see and perceive things go a long way in affecting your mind. When you go through difficult times, your reaction to it will totally depend on your perception of it. Perception could in short or long term, individual or collective, but whichever way it comes, you have a responsibility to always put yourself on the right viewpoint all the time even when you face difficult times. A water in a cup is either half empty or half full; it's all based on your perspective. You can either see a problem in a problem or a solution in a problem. What you choose to do about a problem will be based on your perspective which will eventually determine your outcome.

Game Activity:

What are those areas of your life or the things around you that you need to change your perspective about? Can you be more optimistic and positive about it? Come up with a better perspective of those things and see how it will affect

your perspective. Afterwards, document your change of perspective experience and share with your friends.

BRAIN WORKOUT 65

Become a Critical Thinker

Critical thinking is the process used for effective decision making. It evaluates options and separates facts from fictions. It is the gathering, analyzing and processing of information, facts and theories so as to make effective decisions. A critical thinker meddles with thoughts and peruses with abstract realities, making use of mental navigation through a thought process to arrive at a conclusive analysis. You are not a critical thinker until you have developed your thinking ability and have mastered the art of thinking. Critical thinking is a valuable process that should be applied by everyone.

Game Activity:

A good way to start thinking critically is to take a word or a set of words culled from a book or journal and ponder over it trying to analyze its true meaning and its application. Give yourself at least 20 days of practicing how to think

critically. Afterwards, document your critical thinking experience and share with your friends.

BRAIN WORKOUT 66

Master Self-Talk

Self-talk is a fundamental factor for you if you want to develop your brain power. It is a means through which the mind is stirred up to function effectively. Words are powerful; they can stir up negative emotion such as anger, rage, resentment etc. Words can also stir up positive emotions such as hope, joy, excitement etc. what others say about you is not as important as what you say about yourself. Self-talk helps you to rev up your brain power with positive feelings and energy. This is why you must master self-talk so you can learn how to use it to channel the right energy and vibration to your brain.

Game Activity:

You might have been told that you're a colossal failure, ugly, useless, dumb, not smart enough, average minded etc. It's time to give yourself a high quality self-talk by erasing all the negative thoughts and images you have about yourself while replacing it with a better image about yourself. Take some time out to practice self-talk for about 15 days. Afterwards, document your self-talk experience and share with your friends.

Sniff basils leaves

Many studies reinforce the use of the entire basil leave plant for human use and its therapeutic value. All parts of the basil plant act as an adaptogen. An adaptogen is a natural substance that helps your body adapt to stress and promotes mental balance. Adaptogen improves the brain function, it lowers inflammation, it improves energy levels, improves the function of organs and systems. Basil leave has been shown to have antidepressant and antianxiety properties similar to antidepressant drugs. Studies have shown that people feel more social and less anxious when they sniff and take basil leaves.

Game Activity:

Go to a farm around you and ask for basil leave. Find out what is it called in your native language and get some for yourself. Practice the art of inhaling the scents while also drinking the juice after squeezing it out from the leave. Do this for at least 5 days or more. Afterwards, document your basil leave experience and share with your friends.

BRAIN WORKOUT 71

Learn To Spell Backwards

Our brain has an amazing ability of learning new things. This means that your brain is flexible. Learning to spell backwards is simply your ability to spontaneously and accurately reverse words. Two strategies are required here; first is the reversal according to the phonetic structure of the words or reversal according to their spelling. This is what is called 'inversion' also known as 'anastrophe' which is the reversing of the word order. Developing this skill requires an insane amount of repetition and concentration. Spelling backwards forces the brain to recall but at the same time reorganize itself. Learning to speak backwards shows the remarkable power of the brain.

Game Activity:

Pick up 30 familiar words and learn to write and spell them backwards. Ensure you pronounce the words according to their phonetic structure or according to their spelling. Spend the next 20 days carrying out this exercise until you can do it flawlessly. Afterwards document your spelling backward experience and share with your friends.
